WHO Classification Of Tumours Of The Breast (IARC WHO Classification Of Tumours)

Synopsis

WHO Classification of Tumours of the Breast is the fourth volume of the Fourth Edition of the WHO series on histological and genetic typing of human tumors. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. This book is in the series commonly referred to as the "Blue Book" series.

Customer Reviews

Another excellent book in the WHO series. Well written and very helpful for general pathologist. Highly recommend to replace the older version with the new.

This book does provide me with the most updated classification of the breast cancer. I like it very much and recommend it to every pathologist.

This is a must if you practice pathology, especially breast pathology. New chapter on papillary breast lesions is excellent. Thanks.

Very good book. Product brand new, as described. No fellers. Thank you and I hope to deal with you soon. Happy New Year!

Not much new stuff in this book, old WHO Breast classification book is fine.

My sister-in-law in Brazil is doing her Master's thesis on breast cancer. No copies were available in Brazil. She emailed me and said had it available but will not send it to Brazil. I had it sent 1 day delivery and got it as predicted. The next day I sent it to Brazil 3-5 day delivery which took 13-15 days but it was received with a very happy sister-in-law.

it's useful and fast review

Good
