Development Of The Human Dentition
Synopsis

For almost three decades, Prof van der Linden’s classic text, Development of the Dentition, has been the international standard reference in its field. Now, he has updated those concepts in a new edition. Starting with tooth formation and the development of the deciduous dentition, the author systematically takes the reader through the transition to the permanent dentition and through the aging of the dentition. Emphasis is placed on the relationships among the development of the dentition, the growth of the face, and functional factors. Subsequently, the development of orthodontic malocclusions is presented, followed by the effects of untimely loss of deciduous teeth.

Contents:
Formation of Teeth
Jaw Growth
1st Transitional Period
Intratransitional Period
2nd Transitional Period
Changes in the Molar Region
Adult Dentition
Development of the Dentition
